**L. Zevin** (e-mail: [lzevin@pochta.ru](mailto:lzevin@pochta.ru))

### **ON HOW TO EVALUATE THE EFFICIENCY OF A REGIONAL ECONOMIC INTEGRATION PROJECT**

Rapid development of regional movements, including economic integration is state's reaction to the advance of globalization in order to restore the balance of interests. Regional movements are variable in content and institutional formats. One can't measure the progress of regional economic integration by the same, common criteria: integration in the developed regions aims, first of all, at the expansion on the markets beyond their borders while its aim in the peripheral ones is to increase the capacity of intraregional markets and regional infrastructure. Proposals of how to measure the progress of economic integration in the peripheral regions, including Eurasia, are made.

**Key words:** Regional integration, integrational threshold, efficiency criteria.

### **UPON THE ANALYSIS OF ECONOMIC GROWTH IN THE INTERDEPENDENCE OF TURNOVER AND THE ASCERTAINMENT OF MARKET EQUILIBRIUM**

The proportionality factor  $k$  in the Cambridge equation in the foreshortening of quantity theory of money is interpreted in a new fashion, namely on the base of

queuing theory. Volumes of the requests are expressed as parts of GDP, depending on the values of the production function, which is the intensity of the produce. It is supposed the possibility of achieving of a steady-state or ultimately drawing near to mode of functioning of the macroeconomic network, both sectors of which, namely the production-consumption and the market, hinge are of the single-channel queuing system with waiting.

**Key words:** Cambridge equation, the quantity theory of money, turnover, queuing network, balance of two sectors, multiplicative production function, the Solow model.

**P. Kokhno** (e-mail:pavelkohno@mail.ru)

**A.Veyko**

### **MANAGEMENT OF COMPETITIVENESS OF SPACE TRANSPORT SYSTEMS**

In article the problem of effective production of space-rocket production as development of means of removal is continuously connected with introduction of innovative technologies both for production of rockets, and for their operation on technical and starting complexes is investigated. Introduction of innovative technology gives effect in various areas (economic, social, technological, ecological, effect of increase of competitiveness), but the most significant among other is the technical and economic effect. Thus technological labor input of its production acts as one of the main parameters influencing competitiveness of domestic means of removal. Decrease in labor input at the expense of a factor of development of production, different introduction of innovations and the general optimization of management leads to decrease in prime cost and formation of competitive price of a product.

**Key words:** raketno-space production, competitiveness, labor input, production cost.

**R. Bazarbaeva** (e-mail: rahat\_b@mail.ru)

### **DEVELOPMENT OF GOOD GOVERNANCE INSTITUTE AS THE EFFICIENT FACTOR RESISTING CORRUPTION IN KYRGYZSTAN**

State intervention in the economy of Kyrgyzstan is necessary not only to ensure the normal functioning of market processes, but also to reduce the level of corruption and achieve sustainable economic development. Therefore this article examines the institute of good governance of the economy, the implementation of the basic principles of integrity in the work of government, aimed at combating corruption.

**Key words:** Good governance institute, efficiency of institutional changes, public monitoring indicators, the provision of services, anti-corruption.

**N. Novichkov** (e-mail:novichkov@gmail.com)

### **ABOUT THE EVOLUTION OF SCIENTIFIC KNOWLEDGE ABOUT PROFESSIONAL ACTIVITY OF A PERSON**
