THE VAT RISE AND THE INCREASE IN THE RETIREMENT AGE ARE NOT THE MEASURES TO START WITH, WHEN SETTING ABOUT THE SOLUTION OF LONG-RUN PROBLEMS

The author concentrates on major shifts in economic policy and maintains that the VAT rise and an increase in the retirement age in the near future may negatively affect the economic growth and the living standards of the population. He suggests a number of measures being taken sequentially with the view of creating more favorable conditions to solve such key problems as the acceleration of the economic growth and ensuring social security for senior citizens. Specific macroeconomic indicators are given, sticking to which, with active economic policy in the next 1-2 decades, will result in sustainable economic recovery. 

Key words: retirement age, healthy life expectancy, VAT, structural reforms, ownership forms ratio change, investment credit, deficit financing of the state budget.

TO GO FORWARD MEANS TO REVIVE THE MARKET ECONOMY

There are two main ways to improve the efficiency of the economy. They are: the improvement of the economic policy (that is, the performance of the entity supervising the economy) and the improvement of the economic system
itself (as a subject of public administration). As it seems, scientific papers on economics (both Russian and foreign) reveal a one-sided fascination with the search for a good set of methods of public administration of the economy. The author attempts to show that a more promising research trend is fundamental to the improvement of the present-day economic system and its modernization. **Key words:** capitalism, free competition, monopoly capitalism, state monopoly capitalism, monopoly, state.

ON THE ASSESSMENT OF THE COMPANY READINESS FOR DIGITAL TRANSFORMATION

The paper presents the results of the analysis of the companies that are successful in digital transformation of their activities. It provides the methodological recommendations on the analysis of the current state of the company and identifies the organizational and administrative changes required. The basis for the proposed approach is a model for the assessment of digital maturity of a company from the point of view of intensity of its investments in IT and its ability to manage the changes. The results of the analysis of the digital maturity level and of the approaches to risk management allow to model the targeted state of the company and the way to reach it.

Key words: business transformation, business process, enterprise architecture, maturity level, business architecture, change management, IT management, risk, purpose, goal-setting.
THE ASSESSMENT OF THE ECONOMIC EFFICIENCY OF BANKS’ LEASING ACTIVITY

The article examines the effectiveness of leasing operations and assesses the effectiveness of leasing activities which are especially important for domestic banks.

**Key words:** leasing, leasing operations, leasing payments, leasing deal, leasing as an alternative source of financing.

ASSESSING THE ECONOMIC PERFORMANCE INDICATORS OF THE RUSSIAN FAR EAST AS A TERRITORY OF PRIORITY DEVELOPMENT

The article gives a review of the world practice in the assessment of economic performance for special territories. The authors examine the current state of the Russian Far East as a priority development area and suggest a new approach to the evaluation of economic performance of the territories prioritized as the would-be zones of the expedited socio-economic growth.

**Key words:** special economic zone (SEZ), territories of priority development (TPD), Russian Far East, evaluation method.

THE CALCULATION OF CREDIT LOSSES IN COMMERCIAL BANKS

To determine the composition of credit losses, the author has classified them by type. The analysis of general approaches to evaluating the size of losses has shown that different methods are used for various activities. Some of them offer models for predicting probabilistic values, others are focused on the evaluation of actually incurred losses. The study shows that the effective solution to the problem of managerial accounting for credit losses involves the building of complex models of loss management in the banks.

**Key words:** Bank, credit, credit losses, risk management, calculation of losses.
